Quality Construction

Modular Versatility

the **CREW TABLE** *Functional Modular Versatility*

Designed with a contemporary look featuring angled legs with reveals, beveled side frames, and molded wire flaps, the CREW series offers modular "add on" configurability and power options. Choose from a selection of center sight screens, power options up to 8 wire four circuit, plus data, powered USB ports, HDMI, VGA. Available with base, overhead, or cord feeds. All the connectivity required in today's office environment. Choose from hundreds of laminate and edge combinations to customize your look. White powder coat frame compliments today's color schemes. Aluminum extrusion construction is light and sturdy, and reconfigures easily.

the **Starter**

The first pair of tables can stand alone, or can be paired with add-on trailer units. Available in Basic and Plus configurations. The Basic configuration features a simple centerline extrusion that will hold the sight screen, markerboard, or ezoBord. The Basic configuration is non-powered. Add surface mount daisy chained power/data units as desired, or simple grommets. The Plus configuration includes a hinged dual flap, concealing power troughs for power and data cord management. Power can be added via a ceiling feed through a power pole, or base feed through a flexible conduit or cord with plug. Table lengths of 48", 60", 72", & 96" are available, in both 24" & 30" depth. Custom sizes also available.

the **Trailer**

Once the benching run is started, each additional pair of tables, or Trailer, is simply added on. The center legs are straight, not angled, everything else remains the same. Same sight screens, same center flaps, same power options. Add as many Trailer units as your floor plan dictates. Power units are daisy chained to connecting tables. Up to 16 outlets per circuit.

Power Points

Choose from both surface mount and under table mounted power. The Power Pack unit has 4-circuit, 8 outlet power with a dedicated computer circuit. The Villa unit has two to four power outlets and data capabilities, with a hinged cover. The Cove unit has up to six outlets and powered USB, HDMI, VGA and audio options with a Teleplate. Finishes available include metallic silver, black, and white powder coat.

Polycarbonate Sight Screen
12" - 24"H, aluminum frame

ezoBord* Tackable Panel
12" - 18"H, frameless

Markerboard
12" - 24"H, gloss white finish
